Mr. Gerry Sheridan  
G.M.S. Limited  
Legga  
Moyne Co., Longford  
Ireland

Dear Gerry,

Icynene<sup>®</sup> is an environmentally safe product that does not contain any CFCs, HFAs, HCFCs, Formaldehyde or volatile organic compounds; Icynene<sup>®</sup> is 100% water blown and contains no harmful blowing agents.

Icynene<sup>®</sup> does not contain chlorofluorocarbons, it is inert and does not contribute to lowering the PH in its environment, and therefore it does not contribute to corrosion. In addition to this The Icynene Insulation System<sup>®</sup> when encapsulating residential wiring will not cause wire temperature to exceed safety limits.

For the past 20 years we have successfully used Icynene<sup>®</sup> in all type of electrical installations without any problems. The attached Ontario Hydro letter (Provincial Utility Authority) has provided the credible certification accepted by all jurisdictions in North America, Japan and elsewhere.

Trust you will find this satisfactory.

Yours truly,

A handwritten signature in black ink, appearing to read "G. Farkas", written over a large, stylized loop.

Dear Mr. Farkas:

Use of Icynene Insulation in  
Accordance with Electrical Wiring

In response to your request, I presently know of no reason why electrical wiring installed in accordance with the Electrical Safety Code will not operate safely in buildings where the thermal insulation is of the Icynene type.

Yours truly,

A handwritten signature in cursive script that reads "R.L. Hicks".

R.L. Hicks, P. Eng.  
Chief Electrical Inspector
